## Community participation – Resident interview, Vision workshop Activity

1. In 2017, the residents, the NGO team, and a group of experts in various fields, including landscape architects from Chinese Cultural University, local architects, and color experts, all worked together to identify the surrounding color system. By conducting participatory planning and design workshops, the team reached a consensus on the final color scheme of the old pier of Zhengbin Fishing Port.
2. The local NGO team (Keelung Cityscape Development Association) participating in this series of workshops took the initiative to collaborate with the public on the color coating project.
