

The Watering Flywheel Contributes Water Circulation For Urban Forests

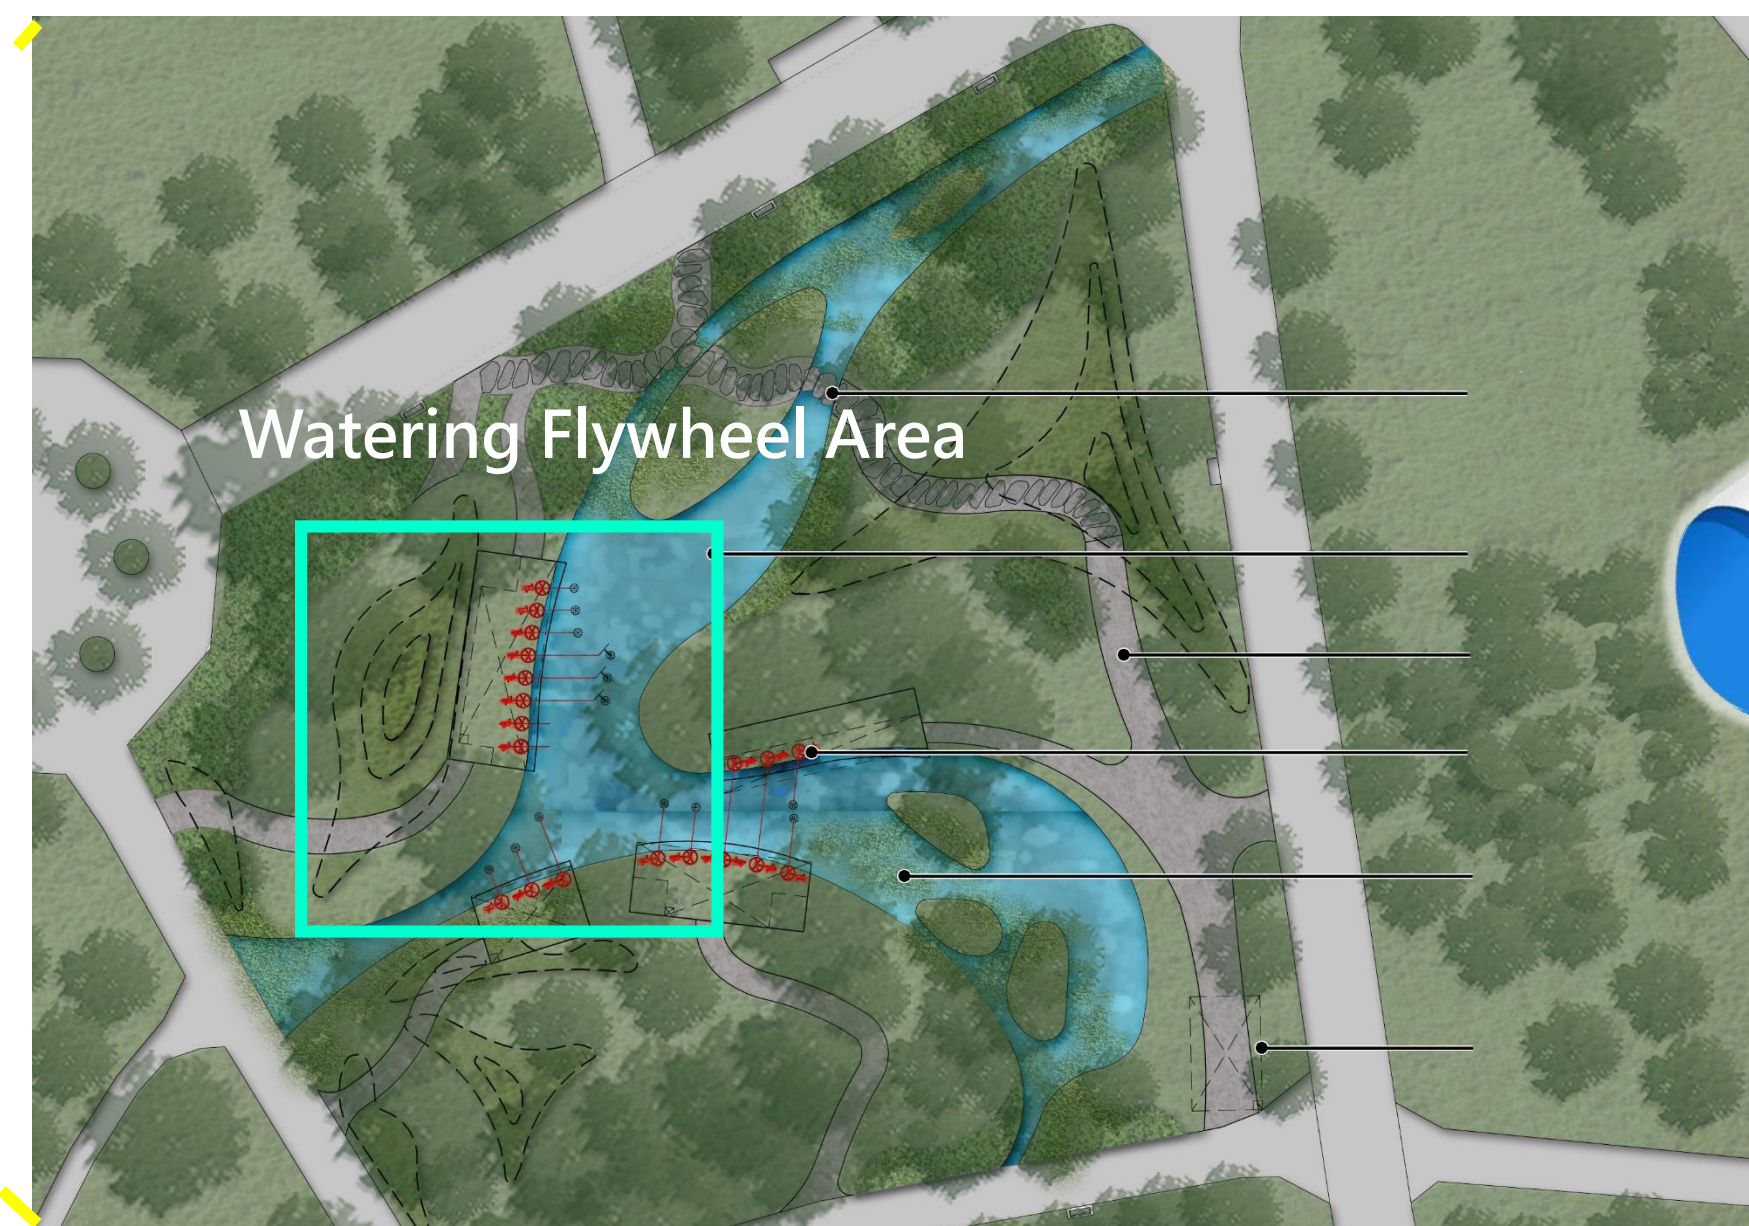

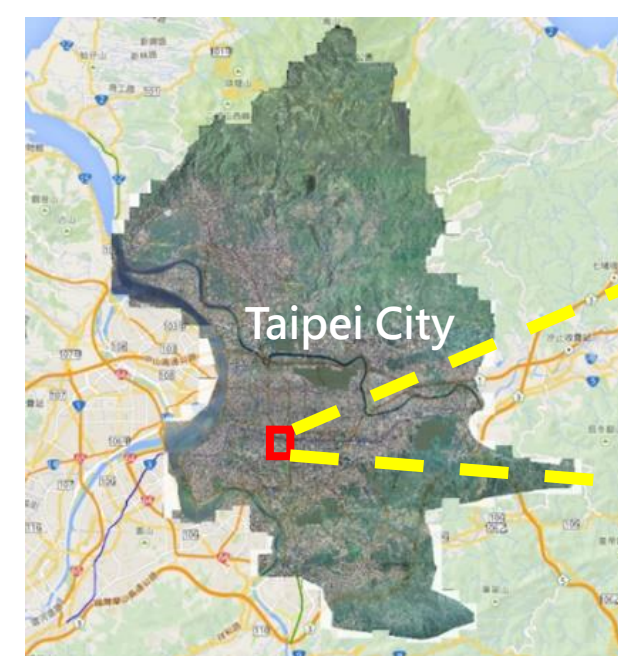

Overview

The KEEL CAR is commonly known as the waterwheel. In the early era, the rural areas of Taiwan used Keel Cars to drain the water from the Drainage to the higher field waterway to irrigate.

Dissolved oxygen and The Flywheel

FLYWHEEL
TAIPEI ECO GYM

By the concept of using the pedaling facility to make water into small splashes, increase the contact area between the air and the water body, and let the air combine better with water, increase the oxygen carrying capacity of the water body, plus a good looking appearance and durable mechanical in design that operated with an easy-to-use human-machine interface. In the six-month development process has been modified several times to integrate the watering flywheel with the environment.

Whether tourists have joined the members of the TAIPEI ECO GYM or not, as long as they step on the flywheel, they will contribute to the activation of the water tanks, not only exercise their body, but also do public welfare, it is really killing two birds with one stone.

Community Involvements

Community volunteers and NGO volunteers work together to protect the community park ecology.

The community is highly recognized and dedicated to the community park ecology.

Volunteers enthusiastically introduced, children simply can't wait to experience.

Volunteers are actively engaged in the concept of water resources and environmental conservation through the flywheel.

Community Confidence and Recognitions

The community holds a watering-flywheel age-grading competition, and the prize-winning children receive prizes happily.

Create a new type of watering flywheel facility, and help eco-mosquito resurgence, bringing a new look to the urban landscape.

The people took the time to go to the watering flywheel for exercise and fitness. It always packed.

Community volunteers are actively involved, and with the flywheel, they get enthusiastic participation and high recognition from the people.
